

ST. PIERRE

This is a "Shelt" type standard 2 deck coaster built in 1945 and in 1959 extensive alterations were made including the conversion to a single deck ship with forecastle.

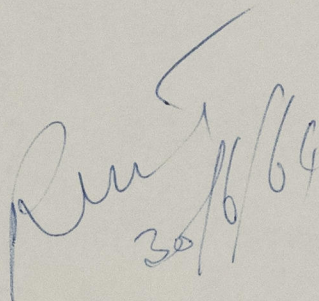

The Montreal Surveyors were advised at that time that in view of the extensive alterations the scantlings should be considered as the basis of the 100A1 class.

The Midship Section plan was approved for the class 100A1 and from a ~~good~~ examination of the plans the ship appears in order for unrestricted class.

It is therefore submitted that class be amended to 100A1.

26th June, 1964.
