.....R.....

Dear Sir,

ms. "LUCIANO CASTRO"
Rio Report nº 9606.

Further to your telegram, I have to advise you that this ship has been in drydock at Rio de Janeiro for Docking, Screwshaft Survey & Special Survey. The ship was in drydock for some 34 days and the bottom was found to be extensively indented.

We could not recommend a date and Special Survey although the ship in all other respects is in good condition and all tanks are free from leakage. The Owners seemed to be unaware of urgency to repair the bottom. Examination of the tanks revealed that the floors had been welded to the shell and the rivets cap welded on the outer shell.

The ship has also been surveyed for a fractured screwshaft, and upon examination of the sternbush this was found to be of lighth-vitae and not cast iron. A new bronze bush with white metal lining has been fitted and engine trials proved satisfactory.

The Owners stated that they were arranging for the bottom shell to be repaired in the near future but seemed vague when pressed for a date.

Yours faithfully,

J. J. Laway
Senior Surveyor.

SAN 10/7.

The Secretary,
LONDON.
