

Mercury

It is submitted the New York Surveyors be informed that the figure of 14.14 sq. inches given in the report for the total area through the duckey boiler safety valves would satisfy the requirements of the Rules if an approved type of high lift safety-valve were fitted.

They should however state whether the type of valve fitted has been approved in this office.

The report gives the makers of the safety-valves as the Crosby Bean Gage Co. and in this connection the Surveyors should be referred to the Secretary's letter on this matter of 29-11-37 in respect of the S.S. "Louisiana" & "Florida".
