

Empire Yedunir.

The main engines were supplied by British Polar
& constructed under British Cooperation. These engines
are stated to be duplicate to those fitted under
Lloyd's Register which were approved for torsionals.
It is noted that the B.C. State the flywheel as
1.805 tons = 4043 lb. On Lloyd's approval the
weight given is 4400 lb. The diameters are the
same.

Is confirmation or further investigation necessary
please

Mr. Forsyth

The particulars on which the torsional
vibration characteristics have been
based were checked & found in order.
Chas.
