

Steel Twin Screw Tug "Poolster", built in
1889 at Amsterdam, not classed in the
Register Book. 54 tons register.

This vessel has been surveyed at Amsterdam
by W. van Ollefen who now forwards a first
entry report and recommends her to be classed
A for tug purposes or river purposes only.

It is submitted that as the steel of which
this vessel is constructed has not been tested
as required by the rules, by a Surveyor to this Society,
no class can be assigned, as decided by
the Committee in previous similar cases.

W. van Ollefen should in all such cases
submit the particulars for the consideration
of the Committee before undertaking the
survey of a vessel not previously classed
in the Register Book.
