

Now Wood Schooner "Agnes" 64 Tons
built at Bude under Special Survey
with a view to the T3A.1. Class, including
two years for Metal fastenings but by
mistake the shelf and waterway bolts
have been driven of galvanized iron
instead of Yellow Metal. The Builders
propose to drive as many extra bolts of
Yellow Metal, as compensation, but it
is submitted that to render the vessel
eligible for two years for metal fastenings
the galvanized iron bolts in the shelf
and waterway should be renewed with
yellow metal in accordance with the
second paragraph of Sec 46.

The vessel appears eligible to be classed
as recommended namely

9 yrs Table A

1 yr mixed material

1 yr salting

1 yr metal fastenings.

12 A-1.

9 and 12 years material

Cf. salted.
