

Iron S. S. "Peregrine"

1<sup>st</sup> Entry - Rept. Sanit. No. 5637

It is submitted that before this case is put forward for the Committee's consideration, the Report should be returned and the Surveyor Mr. Keydell, should be requested to fill in the manufacturers' name or trade mark of the Iron & Steel used in the construction of this vessel, and to state whether the material has been tested in accordance with the Rules.

The Surveyor should also be asked to state, on this Report, whether the alternate reversed frames extend to the Forecastle Deck as mentioned on the approved sketch of Midship's Section in order that the two may be made to correspond with each other and with the vessel as built; and, as it is observed that the collective weight of the Bower Anchors now on board is less than that required by Table 22, Mr. Keydell should be asked to offer any remarks he may have to make on this subject.
