

Fal No:

26th February, 1898

Alex. J. Williamson

The Master carrying the machinery of the s.s. 'Arctis' 79 tons net register, of Falmouth, on the 26th inst. for the purpose of ascertaining the present state condition of the main engine cylinders and the valve cylinder face of the auxiliary engine for working the pumps.

On examination the undersigned found the walls of the M.P. M.P. & L.P. Cylinders of both main engines to be in good condition. The auxiliary engine cylinder face was in fair condition, but the valve face was found to be slightly grooved & hollow.
