

S.S. "LORD PANMURE".

It is submitted the Owners be informed that in order to admit of this vessel being examined as required by the Rules, the hull, machinery and boilers must be opened up and prepared for survey as set forth in the requirements for the Second Survey No. 3. When the vessel is so prepared for survey and an intimation is received from the Owners to this effect, the Society's Surveyor at Falmouth would be instructed to attend.

A midship section, profile and deck plan of the vessel shewing the scantlings and arrangements of the parts of the hull, also a plan of the boiler, should be furnished to this Office by the Owners. Particulars of the date and place of build of the vessel are necessary for consideration to ascertain whether the scantlings and arrangements are equal to Rule for a class in the Register Book. It is desirable that the plans referred to should be considered before the survey of the hull, machinery and boilers is undertaken.

A copy of the Second S.S. No. 3 Rule requirements should be sent for the Owners' information.
