

S.S. "Cumberland"

No 298

This vessel is building by Messrs W. Hamilton & Co. for the Federal Steam Navigation Co. with a view to class 100 A. 1.

The Owners state she is fully insulated excepting in the upper tween decks, but they contemplate continuing the insulation in this space at an early date, in the meantime they desire to dispense with the cargo battens at this time.

It is submitted the Owners be informed that if cargo battens are not fitted in the upper tween decks the notation of "Cargo battens not fitted in upper tween decks" will be made on the certificate of classification and in the Register Book.

If this is approved the Greenock Surveyors should be advised.
