Kingston Iron Works

Wm Davidson Esq

Dear Sir,

Herewith we beg to hand
our tracing of midship section "Viceroy"
which we propose to lengthen 36 feet
midships - The figures and the shape
are only approximate but we think they
are correct. we have been able to check
only all by actual measurement.

As will observe we propose to double
the strake next below the sheerstrake
 $\frac{2}{3}$ ^{7/8} the length of the ship and to
increase the width of the Gunwale
stringer plate 24 inches for $\frac{1}{2}$ the length -
We believe the butt straps of the sheer-
strake go from frame to frame and if
we think it necessary we would

treble rivet all the butts of the main
gunwale stringer plate over $\frac{1}{2}$ the vessels
length -

The increase in the length of the Poop
is made to cover over the Engine and
Boiler space and is probably an ad-
vantage to the ship -

We trust the Committee will continue
the A class, and shall feel much
obliged by as early a reply as you
can manage

Yours faithfully

(Signed) Humphry Pearson
