

S. S. "Constance" of 421 tons
recently built at North Shields and
Classed 90 A.

This case has previously received
the attention of the General Committee, when
it was decided that in consequence of the
large erection on deck the equipment should
be regulated by the addition of one-tenth to
the plating number, beyond that required for
a flush decked vessel, which has now
been complied with, the equipment number
being now 11,217 instead of 10,198 previously
given. She appears eligible now to
receive the Fig. 1.
