

New Sailing Ship Strathmore of 1472 tons
built by Messrs Brown & Simpson at Dundee for the
100 A.1. Class.

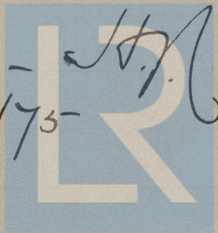

It appears that the bowsprit is only $29\frac{1}{4}$ ins
diameter at the partners the Committee's suggestion
for the diameter at this part being 35 ins.

It is submitted that Mr Alexander should be
requested to state whether he drew the Builders attention
to this great difference, and what additions have
been made in its construction to compensate for the
same.
