

Standard. Sept. 8<sup>th</sup> / 45.

Mr. Longridge.

At the London meeting of the Institute, a paper was read by Mr. David Joy on "the Howard boiler." The discussion on the subject was now resumed. Mr. Fletcher, of the Steam Users' Association, warmly condemned the adoption of this boiler, and said he had records to prove that it killed more people than any other boiler, and he warned the public to avoid it.
