Dear Sir,

I have to thank you for your note of y'day. Unfortunately however I have no copy of the specification of masts, &c, & it would take two or three days to procure some, by which time I fear the rivetting will have been in progress.

I do not know if you have seen a sample of Siemens Steel; I send you a couple of samples by bearer for you to look at. I never saw such beautiful stuff in my life! I am having my yards made of this, & my masts of Best Best Staffordshire Iron.

Yours truly  
David Brown

I can hear this sample in the  
if you would like to keep  
it then to any of your Country  
or those who were who reach  
really at stuff - it has a  
terrible share of from 26 in to  
36 in to square inch & an  
elongation of 20% ...  
I expect to see my digging  
made from this wire -  
S.V. -

\* It guaranteed to last 100 years in a circle  
1/2 times its thickness - from 19.5 in. to 20 in.  
S.V.
