

S.S. "Magoria."

Before dealing with this case, it is submitted that the Surveyors be asked to explain why they consider the main boilers fit for a pressure of 160 lbs per sq. inch, when according to the dimensions given in their report the furnaces & back tube plates are only fit for a pressure of 157 lbs. & the lower back plates for a pressure of 143 lbs. and they should be informed that when submitting a case of this kind, a drawing of the boilers should be forwarded with the report.
