Dec: 5<sup>th</sup> 1892

The Secretary  
Lloyd's Register of Shipping  
London.

Sir,

I beg to acknowledge the receipt of your letter of the 2<sup>nd</sup> inst. respecting the steamer "Massachusetts", together with the New York and London reports, and also one of the rivets removed from the vessel.

With reference to the remarks concerning the rivet, I beg most respectfully to say that I fear there has been some mistake.

I have examined the rivet carefully; and it appears to me to have conformed with the hole, and also to have filled it, as evidenced by the shoulder, and the flat part of the head - which was originally round -

*Referred to the Chief Surveyor.*

is a proof of its having been well laid up for this particular kind of rivet, the accompanying sketch will prove this more clearly, where A shows an inch plug-headed rivet simply inserted in the hole cold, and B shows the rivet sent here as it was in the "Massachusetts".

For better comparison I return the rivet sent, accompanied by a new inch plug-headed rivet by parcel post.

I would observe with regard to these plug headed rivets, that they were first introduced by Messrs Harland & Wolff while building the classed steamers "Cupic" and "Punic", solely for the reason that they were considered better adapted to meet the irregular sizes of the slight dovetail formed by the different dies in punching. A great deal of trouble was experienced at first in getting satisfactory workmanship, because the men did not like them, they required greater care in heating

and closing; this difficulty however was gradually overcome and very good workmanship resulted; it has since been observed however that these plugheaded rivets are more readily disturbed when vessels come rather heavily in contact with quay walls or any other hard substance; it is therefore thought by the Builders that the "Massachusetts" must have come into contact with something sufficient to account for the rivets having started, although not sufficiently heavy to leave any permanent impression on the plating.

For the above reason plug headed rivets are not used now - excepting in way of the inner bottom.

The New York and London reports are herewith returned.

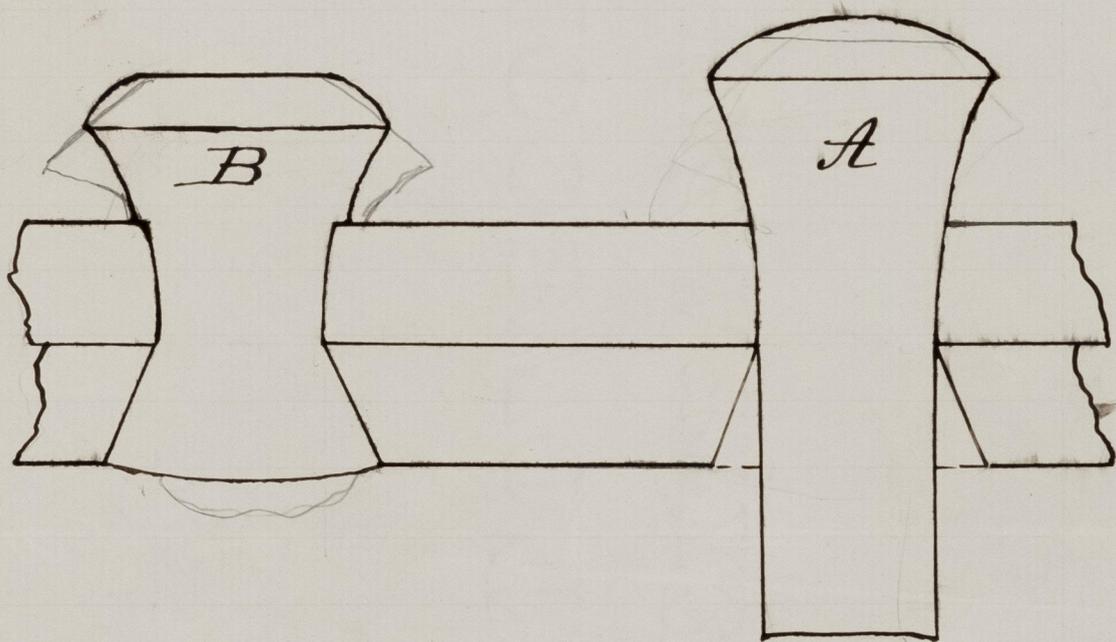

I am  
Sir

Your obedient servant  
James Turpin

P. D. O.
