

Remarks on Lundland Reports N^o 0002 & 0003

Two Composite Ships Reported upon Forms made for Ships built of Timber!

If the Surveyors have not got Composite Forms, it would be much more convenient to make their Reports on such Ships upon Iron Forms, than upon those for Timber.

It will be observed that neither of these two Reports state the breadth and thickness of the Iron Plates which run the Strake outside at Ridges also the Diagonal Plates, their dimensions are omitted in both, and the Iron Strake dimensions, and date of Launching is omitted in N^o 0003.

If these omissions are corrected I am of opinion they will both be eligible for Classification as recommended by Mr Martindale, and to be marked in Register Book First B.S.

 August 2/66

Both Ships now appear eligible for Classing as recommended to the Committee.
