

Composite Ship, "Carnatic" 350 Tons.
Built at Sunderland in 1857.

Having held a Survey on this vessel while building, at the request of the Chairman I have examined her 1st Entry Report, and my own Report upon her, without finding any thing to militate against her class being raised to 16A-1, as in similar cases recently, and in accordance with the "Suggestions" issued by the Committee for Composite Ships -

B. W. Raymond

30th Aug 1867.
