

WLN/MB

14th July 1949

Mr. J. P. Smith,
Chief Engineer,
s.s. SAN ROBERTO.

BOILER SURVEY

It is recorded that in December last the boilers of the SAN ROBERTO were passed through survey, all with the exception of floating and adjusting the safety valves.

In order to avoid getting too much out of step with regard to these surveys, it is advisable that you arrange to float and set the safety valves as soon as possible, choosing the most appropriate port, which in our opinion will be Curacao.

Please advise this office the date this survey is carried out.
