

"LITTLE EVY" ex "Uaian" (No. 80087 in Register Book).
Conversion to Motor Vessel.

IT IS SUBMITTED the Rotterdam Surveyors be informed that the diagrammatic plan of lubricating oil and compressed air piping arrangement merits approval provided the arrangement be as shown and amended on the plan and the remaining requirements of Sections 5 and 6 of the Rules for Heavy Oil Engines (1934-5) be complied with so far as they are applicable.

It is concluded that the reserve lubricating oil pump is capable of supplying the main engines continuously with an adequate supply of lubricating oil when the engines are developing full power. ✓ 13-3-35

With reference to the plan of bilge and ballast pumping arrangement, it appears from the First Entry Report that three branch bilge suction, one donkey pump direct suction and one bilge injection were originally fitted in the machinery space and it is considered that wing suction should be retained as now indicated on the plan. Further, these branch suction should be led from mud boxes fitted with straight tail pipes, as required by Section 34, Clause 6(g). ✓ 13-3-35

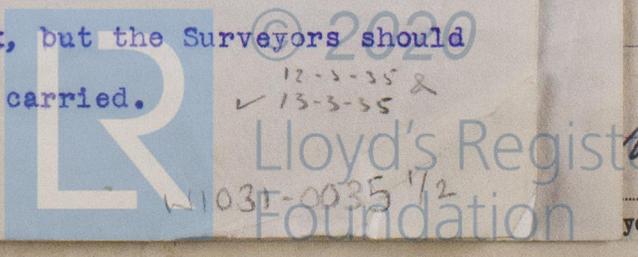

It is noted that the centrifugal bilge pump is driven by the main engine and the Surveyors should be requested to forward full details of the drive of this pump and the auxiliary air compressor. ✓ Section app. 15-3-35

It is concluded that the air compressor can be driven by the auxiliary engine, and that this engine can be started by hand, but this should be confirmed. ✓ 12-3-35

The Surveyors should also be requested to state the size of the ballast pump and whether the donkey boiler will always be under steam when the vessel is at sea. ✓ 50 tons ND 12-3-35

In this connection plans of the oil fuel piping arrangement should be submitted for consideration. ✓ App 12-3-35

It is further concluded that oil fuel will not be carried in No. 4 double bottom tank, but the Surveyors should state in which tanks oil fuel will be carried. ✓ 12-3-35 & ✓ 13-3-35
