

s.s. "N.T. NIELSON-ALONZO".

--

The Oslo Surveyors have forwarded plans of a new boiler built in September 1926 by Messrs. Akers Mek. Verks, Oslo, under the survey of the Norske Veritas for a working pressure of 200 lb. per sq. inch, and state that the boiler has been purchased by the Owners of the above vessel who desire to be informed if it can be approved for a working pressure of 200 lb. per sq. inch.

The scantlings of the boiler do not meet the requirements of the Rules for a working pressure of 200 lb. per sq. inch, but are such as might be accepted for 180 lb. per sq. inch, the working pressure assigned to the above vessel.

IT IS SUBMITTED the Oslo Surveyors be informed that the scantlings of the boiler do not meet the requirements of the Rules for a working pressure of 200 lb. per sq. inch, but provided the boiler be examined internally and externally, and found in good condition and the scantlings be as shown on the plan, the boiler might be accepted for a working pressure of 180 lb. per sq. inch, when fitted in the above vessel.

Return plan.

Retain copy.
