

s.s. "N.T. NIELSEN ALONSO"

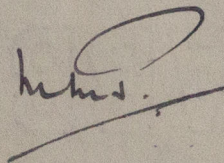

Conversion of parts of lower tween decks for carrying whale oil in bulk.

This case was dealt with on the 14th instant, when the Oslo Surveyors were informed by wire of the scantlings of the new bulkheads and the extra stiffening of the old bulkheads which could be approved.

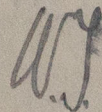

Plans have now been forwarded showing the arrangements in greater detail and the exact position of the new tanks, and it is submitted that provided the arrangements be carried out as shown thereon, and to the satisfaction of the Surveyors, the same will merit approval.

The Surveyors should be informed that no objection is seen to fitting the air pipes for the lower tanks leading to the upper tween decks.

It should further be pointed out that the air pipes fitted both to the existing tanks and to the new tanks should be at least as great in diameter as the filling pipes, if any are fitted.
