

Engine Room One 2" port wing, Two 2" 86" wings, one 2" tunnel In Holds, &c. One 2" wing suction lead
"wing suction in after hold. Centrifugal

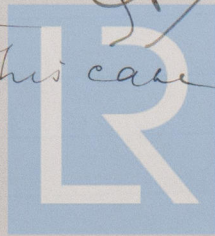

33. "Moordrecht."

Rot. 6655.

It is submitted the Rotterdam Surveyors should be requested to state whether there is no arrangement fitted whereby steam from the main Boiler can be supplied direct to the main Engines without passing through the Superheater, in view of the statement in their report that the Boiler cannot be worked separately from the Superheater.

The Surveyors should be also requested to state what type of H P Slide Valve has been fitted in this case
