

Steel Twin Screw Yacht "FLYING CLOUD".

Plan of cast steel stern tube forwarded by the Genoa
Surveyors.

The plan now forwarded shews a steel casting where the
shaft leaves the ship; it is attached at its inboard extremity
to the bulkhead and at its outboard extremity the attachment is
through a double frame bar.

While the arrangement in regard to the casting could
be recommended for approval, the method by which it is
fixed into the structure of the vessel is not shown in
sufficient detail to enable consideration to be given thereto.

It is submitted the Genoa Surveyors be informed
that the proposed arrangement of cast steel stern tube could
be approved, provided the attachment to the structure at the
outboard end be to their entire satisfaction, and the
arrangements be otherwise as shown on the plan.
