

"LOUISIANA".  
=====

Phl.7314.

It is submitted the New York Surveyors be informed that it is noted from the plans of the oil fired and exhaust gas fired donkey boilers that it was intended to fit safety valves of the "Crosby" type. The report does not indicate the particular make of valve that has eventually been fitted.

In view of this the Surveyors should be further informed that in May last the London Representative of Messrs. Crosby Steam Gage & Valve Co., Boston, called at this Office in connexion with the design of the Firm's safety valves, but he was informed that this design could not be approved. A copy of the Secretary's letter "E" dated 11.5.37 to the Firm's Representative should be forwarded to the New York Surveyors.

Therefore if this design of valve has been fitted, it cannot be accepted.

In this case arrangements should be made to replace the valves by valves of an approved type.
