GLASGOW

26th September, 1924.

H.C. FORSTER,

Messrs. Barclay Curle & Co. Ltd., survey during construction the two Steel Air Receivers No. 275 constructed by them for Messrs. The North British Diesel Engine Works (1922) Ltd., Contract No. 35.

The Material has been tested by the Surveyors to Lloyd's Register: the scantlings are in accordance with the Society's Rules for a working pressure of 475 lbs per square inch, and the workmanship is good. The Receivers having been tested in my presence on the 25th September, 1924, by hydraulic pressure to 675 lbs per square inch, showed no signs of weakness, and were found tight and sound in every respect at that pressure. Working pressure not to exceed four hundred and seventy five pounds per square inch.

Mark on Air Receivers No. 275.

No. 16616
Lloyd's Test
675 lbs.
W.P. 475 lbs
