J. BLULLOCK

The J.C. White Engineering Corporation, of New York attend at the Works of The Midvale Steel Company, Nicetown, Pa., on the 22nd of April, 1917, and subsequent dates, for the purpose of testing and inspecting twenty five rough machined, forged steel rotor shafts, Order No. 17816, Items 3, 4, 6, 8 and 10, A/c Brown, Boveri & Co., Baden, Switzerland.

The test results are shown on attached sheet.

After the forgings had been rough machined, they were examined, and found, so far as could be seen, sound and free from surface defects.

The forgings, after examination, were marked with the forge number and
