M/V "TERESA ODERO"

Dear Sir,

In reply to your classing letter of the 22nd February 1927, regarding Genoa Report No 9741 M.V. "TERESA ODERO" we have to state that owing to a clerical error, the sizes of the main crankshaft webs were given as:-

Mid length breadth 172 m/m

Mid length thickness 62 m/m

these should read-

Mid length breadth 750 m/m ✓

Mid length thickness 225 m/m. ✓

The diameters of the auxiliary engine crankshafts are also given in error and should read 155 m/m diameter with 44 m/m hold^e.

The liners of the screwshafts are in 3 pieces with the joints satisfactorily burnt. ✓

We should be obliged if you would alter the report accordingly.

With regard to the plan of the boilers for this vessel, we beg to state that this was forwarded at the same time as the rest of the machinery plans. ✓

We are, Dear Sir,
Yours faithfully

The Secretary,
London.
