Received from Chief Ship Surveyor

VESSEL'S NAME *Sgt. L. L. "Camosun"* Report *L. L.* No. *992*

The remarks of the Chief Ship Surveyor are desired on this case for the consideration of the Classing Committee.

("The endorsement to contain a succinct summary of any repairs that have been required and to show the cause or causes of such repairs, and also to bring out clearly any exceptional features in connection with the case, so that the Classing Committee may have all the salient points presented in the endorsement."—Extract from Sub-Committee's Report, 24/5/92.)

Nature of Survey

*Leak & docking**14 adst.**139 MR*

The San Francisco Surveyor reports that the deck of this vessel was found to be leaking amidship and it was found necessary to close up some of the planking and fit new planks to enable the seams to be recaulked, the Surveyor stating that the repairs were apparently necessitated on account of unseasoned wood having been used in laying the deck.

The bottom of the vessel has also been examined in dry dock.

The Glasgow Surveyors, under whose survey the vessel was built, have been communicated with, and they state that the pitch pine planking used for the decks was cut about five or six months before being used and when laid was well caulked. The decks, however, were laid during the Winter months from November to January, and the Surveyors also point out that during the vessel's voyage to San Francisco ~~the vessel~~ would cross the Equator twice, and in these circumstances it would be advisable for the decks to receive special attention.

It is submitted the vessel appears worthy to remain classed with record of survey as recommended.
