17th December 1921.

No.3539.

L. O. DAVIS

Messrs The North Eastern Marine Engineering Co., Ltd., attend their Sunderland Works for the purpose of surveying the port main Boiler (No.2363) intended for the steamer "MATADI" (Messrs R.Thompson & Sons' No.309).

The Boiler, as marked below, has been surveyed during construction by the undersigned.

The material has been tested by the Surveyors of Lloyd's Register; the scantlings are in accordance with the Society's rules for a working pressure of 180 lbs per square inch, and the workmanship is good. The Boiler having been tested in my presence on the 25th February 1919 by hydraulic pressure, before the lagging was put on, to 360 lbs per square inch, showed no signs of weakness, and was found tight and sound in every respect at that pressure. Working pressure not to exceed one hundred and eighty pounds per square inch.
Mark on port boiler:-
