

Katarnitas.

Lot. 1095-3.

Before the case, received consideration
submitted the Lot. It may be
requested to forward particulars of
the other large pressure vessels
(usually termed oil extractors) used
in conjunction with the Boilers
which have a revolving drum.

It may be added that in some
cases of Hartmann Boilers,
the working pressure of 43 lb only
could be assigned as although the
seamling of the Boilers were sufficient
for both the ^{form of the} dished end plate
at the bottom of the extractor limited
the pressure of the complete apparatus
to 43 lb.

The drawings should also complete
the description of the riveting given in the
T.E. Reports on the old and reconstructed
Hartmann Boilers by stating whether
the seams are single or double
riveted.

A sketch of the Cast Steel ends
~~plates~~ and the radius of the
end plates is also required.
