

M. S. "WELLFIELD".

Plan of poop stiffening to meet the requirements of the Load Line Convention, 1930, submitted, in triplicate, by Messrs. Curchin & Watson.

It is submitted this Firm be informed that the arrangements as shewn and amended on the plan are such as could be approved to meet the above Convention requirements.

It was understood from Mr. Curchin, on the occasion of his call at this Office, that the bunker on the after side of the poop front bulkhead is at present full of oil, and it will not be possible, therefore, to rivet the horizontal stiffener. In these circumstances the stiffener should be welded to the satisfaction of the Society's Surveyors.
