

Depth for Freeboard (D) Moulded depth ... ..	Depth correction (a) Where D is greater than Table depth	Round of Be Moulded Breadth (B)
---	---	------------------------------------

S.S. "NEKKA MARU"  
-----

The scantlings of this vessel are such as to entitle the vessel to a draught corresponding to that of a C.S.S. vessel.

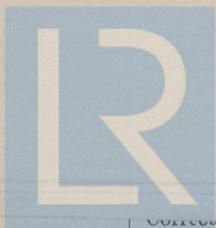

The freeboard assigned by the Japanese Authorities corresponds to a draught which is less than the draught which could be approved as a C.S.S. vessel.

It is submitted therefore that the freeboards assigned be accepted as complying with the condition of classification.
