tions to be addressed to—
URVEYORS.

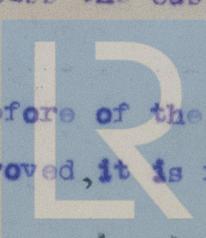

Dear Sir,

I beg to submit in duplicate for the approval of the Committee plan of Certz Rudder proposed to be fitted to the existing rudder frame in the Motor oil tanker "WOENSDRÉCHT", No. 87310 in the Register Book.

The case has been discussed with the Owners' Representatives who desire approval of the rudder being made non watertight, principally at the fitting of the back plate of the rudder round the arms where the clearance is of the order of 1/8".

The desirability of having the rudder watertight, as in previous and similar cases of patent rudders, has been indicated to them, but they wish that the matter should be submitted for the consideration of the Committee, and request that if approval of non-watertightness cannot be given, this Office be informed by wire on Wednesday-afternoon, in order that Mr. van Ommeren, representing the Owners, can call to discuss the case in London, on Thursday.

In the event therefore of the non-watertightness of the rudder not being approved, it is requested this

ice be informed by wire by Wednesday afternoon, 20th inst.

Should however the plan be approved, with amendments
sibly in other directions, it is desired one copy be
urned here at the earliest opportunity.

The maximum width of the rudder, 5'- 8" from the
tre line of the pintles, which could be approved for the
sting 9 $\frac{1}{2}$ " stock, has also been indicated to them, but
ey state that they propose what was previously approved
the case of the sister vessel "Sliedrecht", plans of which
ould be in the London Office.

Minor amendments considered necessary have been
dicated on the plan.

It may be stated that difficulty is experienced
getting these rudders watertight and that experience
pears to show that in the long run they cannot be kept
ertight, for which reason a drain plug is proposed to
fitted.

I am, Dear Sir,

Yours faithfully,

J. R. Edgar.

ne Secretary,

LONDON.

MILITARY ENGINEERING WORKS AND VARIOUS SECONDED OFFICERS

It was the first time I had been to see the old fort, and I was greatly interested in it. The fort is built on a rocky hill, and the walls are made of rough stones. There are several towers and bastions, and the fort is surrounded by a deep ditch. The fort is now in ruins, but it is still a remarkable sight.
