

Gls RPL No 29419

It is submitted that a copy of the above report
be forwarded to the Vancouver Surveyor for
his guidance in dealing with this case, & for
completion of survey.

It might be pointed out to him that the approved
working pressure at Engines is 160 lb $\frac{1}{2}$ & that the
Safety valves of the boilers should be adjusted
accordingly. If however a working pressure of 175
lb is required at boilers (as approved), an efficient
reducing valve should be fitted between Engines
& boilers.
