**General Remarks** (State quality of workmanship, opinions as to class, &c.) *The steel used in the construction of the Boilers has been tested by the Society's Surveyors* Yes - see letter Lth + Burn 11-6-02  
 Material of screw shaft *dup iron* Is the screw shaft fitted with a continuous liner the whole length of the stern tube *no*  
 Is the after end of the liner made water tight in the propeller boss *yes* If the liner is in more than one length are the joints burned ✓  
 If the liner does not fit tightly at the part between the bearings in the stern tube, is the space charged with a plastic material insoluble in water and non-corrosive ✓ If two liners are fitted, is the shaft lapped or protected between the liners *no*

*The machinery of this vessel has been built under special survey in accordance with the approved plans and Secretary's letters and in general conformity with the Rules. The materials and workmanship are sound and good. The Boilers and main steam pipes have been tested by hydraulic pressure and the engines and boilers examined under steam and found satisfactory. The machinery is now in a good and safe working condition and renders the vessel eligible in our opinion to have the notation of \*LMC-6.02 in the Register Book.*

It is submitted that this vessel is eligible for THE RECORD. + LMC 6.02
