No. 1470

For the CHIEF SHIP SURVEYOR and CHIEF ENGINEER SURVEYOR.

which have to be submitted to the Classing Committee "the endorsement to contain a succinct summary of any repairs that have been required and to show the cause or causes of such repairs, and also to bring out clearly any exceptional features in connection with the case so that the Classing Committee may have all the salient points presented in the endorsement."—Extract from Sub-Committee's Report 24/5/92.)

No. 3

SURVEY PARTLY HELD.

2.18

When proposed to be completed

held, &c.,

Screw shaft due for examⁿ. New propeller to fit.

The Special Survey No. 3, due 2.18, was carried out at Barcelona in March 1918, but action was deferred as the centre portion of the watertight bulkhead between the cross bunker and the hold had been removed to allow of barrels being carried in the cross bunker.

The Owners were informed on the 22nd October last that the plates removed from the bulkhead should be replaced and the bulkhead made watertight as before, or as an alternative arrangement the existing non-watertight bulkhead at the after end of the cross bunker should be made into a watertight bulkhead before the vessel was again put into service, or there would be no option but for her to lose her class in the Society's Register Book.

The Owners, in reply to the Paris Surveyors, stated there is a watertight bulkhead at the after end of the cross bunker and that the work was done at Oran, when some alterations were carried out under the supervision of the Bureau Veritas.

They added that at the time of the acquisition of the vessel, they were ignorant of the fact that she was classed with Lloyd's Register; and in reply, were informed, it would appear it was not their intention to maintain the class of the vessel in the Register

Book and that, in the circumstances, the Committee would be informed accordingly.

The case is therefore submitted for the consideration of the Committee.
