

Messrs. Bethlehem S.B. Co. Yard No.4327.

Electrical Installation.

Petroleum in Bulk.

The New York Surveyors now state in reply to the Secretary's letter of the 16th February, 1938, that the use of 220 volt lighting will be confined to a few emergency circuits in the engine and boiler rooms and will not be used outside these spaces. The Rules limit lighting to 110 volts but permission has been accorded in previous cases for similar emergency lighting circuits.

IT IS SUBMITTED the New York Surveyors be informed that as in similar previous cases no exception will be taken to a small number of emergency lights in the engine and boiler rooms being supplied at 220 volts. It is understood they will be plainly marked to distinguish them from the 110 volt lighting points and that none of these fittings will be outside the spaces mentioned.

It is noted that fuse and cable sizes will be submitted later.
