

Summary of Decisions made in  
Administration of Revised Rules.

Decision

9010191A  
V1631-0106

- b)
- (a) In the panting area the inertia be 80% of Rule solid section.
  - (b) Clear of panting area the inertia may be 90% of Rule solid section.

Interpolation on basis of area.  
For welded stiffeners area is to be maintained but inertia may be reduced.

3.

For tween deck frame welded to hull frame the requirements for flange and extra thickness need not be applied.

(c)  
76)

With F.K. system full height and half height girders not connected to hull.
