

# REPORT ON ELECTRIC FITTINGS.

(OTHER THAN FOR THE PROPULSION OF THE VESSEL) 9 FEB 1929

*Received at London Office.*

Date of writing Report 7 Feb. 1929 When handed in at Local Office

to Port of STETTIN

No. in Survey held at STETTIN

Date, First Survey 2nd Aug. 1928 Last Survey 7th February 1929.  
(Number of Visits 18)

Reg. Book.

63926 on the *Groote Sc., AMSTELKERK*"Tons { Gross 4338  
Net 2314

Built at STETTIN

By whom built *Witsche & Co. A.G.* Yard No. 286 When built 1929Owners *Vereenigde Nederlandse Scheepvaart Maatschappij*.Port belonging to *The Hague*Electric Light Installation fitted by *Schiff-Installation A.G.* Contract No. When fitted 1929.

System of Distribution Two wire conductors /

Pressure of supply for Lighting 110 / volts, Heating — Power 110 / volts.

Direct or Alternating Current, Lighting Direct /

Power Direct /

If alternating current system, state frequency of periods per second —

Has the Automatic Governor been tested and found efficient when the whole load is suddenly thrown on or off yes ✓

Generators, do they comply with the requirements regarding rating yes ✓, are they compound wound yes ✓

are they over compounded 5 per cent. yes ✓, if not compound wound state distance between each generator —

Where more than one generator is fitted are they arranged to run in parallel no ✓, is an adjustable regulating resistance fitted in series with each shunt field yes ✓

Are all terminals accessible, clearly marked, and furnished with sockets yes ✓, are they so spaced or shielded that they cannot be accidentally earthed, short circuited, or touched yes ✓ Are the lubricating arrangements of the generators as per Rule yes ✓

Position of Generators Engine room all side, working platform ✓, is the ventilation in way of the generators satisfactory yes ✓, are they clear of all inflammable material yes ✓

if situated near unprotected woodwork or other combustible material, state distance of same horizontally from or vertically above the generators and —, are the generators protected from mechanical injury and damage from water, steam or oil yes ✓

are their axes of rotation fore and aft yes ✓

Earthing, are the bedplates and frames of the generating plant efficiently earthed yes ✓ are the prime movers and their respective generators in metallic contact yes ✓

Main Switch Boards, where placed Engine room all side, middle grating ✓

If the generators and main switchboard are not placed in the same compartment, is each generator provided with a fuse on each insulated pole as near as possible to the terminals of the generator, additional to that provided on the main switchboard —

Switchboards, are they placed in accessible positions, free from inflammable gases and acid fumes yes ✓, if situated near unprotected woodwork or other combustible material, state distance of same horizontally from or vertically above the switchboards — and —, are they protected from mechanical injury and damage from water, steam or oil yes ✓

are they constructed wholly of durable, non-ignitable non-absorbent materials yes ✓, is all insulation of high dielectric strength and of permanent high insulation resistance yes ✓, if semi-insulating material is used, are all conducting parts insulated from the slab with mica or micarite or other non-hygroscopic insulating material, and the slab similarly insulated from its framework yes ✓

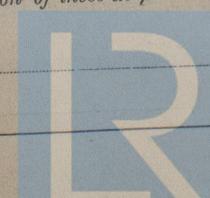

and is the frame effectively earthed yes ✓ Are the fittings as per Rule regarding: — spacing or shielding of live parts yes ✓, accessibility of all parts yes ✓, absence of fuses on back of board yes ✓, proportion of omnibus bars yes ✓, individual fuses to voltmeter, pilot or earth lamp yes ✓, connections of switches yes ✓

Main Switchgear, description of switchgear for each generator and each outgoing circuit, and arrangement of equalizer switches. In each generator a reversing regulator, a fuse on each pole and a double pole linked switch. For each outgoing circuit a fuse on each pole and a double pole linked switch or a single pole change over switch ✓

Instruments on main switchboard 2 ammeters 2 voltmeters — synchronising device for paralleling purposes. Earth Testing, state what means are provided at the main switchboard for indicating the state of the insulation of the system 2 earth lamps ✓

Switches, Circuit Breakers and Fusible Cut-outs, do these comply with the requirements of the Rules yes ✓

Joint Boxes Section and Distribution Boards, is the construction, protection, insulation, material, and position of these as per rule yes ✓

*to German Standards*

Cables: Single, twin, concentric, or multicore singles, are the cables insulated and protected as per Tables IV or V of the Rules applied generally.

Fall of Pressure, state maximum between bus bars and any point of the installation under maximum load 570.

Cable Sockets and other connections, are the ends of all cables having a sectional area of 0.04 square inch and above provided with soldering sockets yes.

Paper Insulated Cables. If cables are paper covered, is the dielectric at the exposed ends of the conductor protected from moisture by being suitably sealed with insulating compound No paper insulated cables.

Cable Runs, are the cables fixed as far as possible in accessible positions not exposed to drip or accumulation of water or oil, or to high temperature from boilers, steam pipes, uptakes or other hot objects, or to avoidable risk of mechanical damage yes.

Support and Protection of Cables, state how the cables are supported and protected Armoured cables supported by cable carriers, secured by clips, where exposed to risk of mechanical damage protected by sheet iron or pipes!

If cables are run in wood casings, are the casings and caps secured by screws yes., are the cap screws of brass yes., are the cables run in separate grooves no.. If armoured and lead covered cables are secured by metal clips, are the clips spaced as per Table VIII yes.

Refrigerated Chambers, if lights are fitted, are the cables and fittings in accordance with the special requirements yes.

Joints in Cables, state if any, and how made, insulated, and protected Watertight joint boxes.

Watertight Glands and Deck Tubes, are all cables passing through decks and watertight bulkheads provided with deck tubes or watertight glands yes.

Bushes in Beams and Non-watertight Partitions, where unarmoured cables pass through beams and non-watertight partitions, are the holes efficiently bushed yes. state the material of which the bushes are made Lead.

Earthing Connections, state what earthing connections are fitted and their respective sectional areas —

—, are their connections made as per Rule —

Alternative Lighting, are the groups of lights in the propelling machinery space arranged as per Rule yes.

Emergency Supply, state position and method of control of the emergency supply and how the generator is driven —

Navigation Lamps, are these separately wired yes., controlled by separate switch and separate fuses yes., are the fuses double pole yes. are the switches and fuses grouped in a position accessible only to the officers on watch yes. in the chart room.

has each navigation lamp an automatic indicator as per Rule yes.

Secondary Batteries, are they constructed and fitted as per Rule —

Fittings, are all fittings on weather decks, in stokeholds and engine rooms and wherever exposed to drip or condensed moisture, watertight yes. are any fittings placed in spaces in which goods are liable to be stacked in close proximity to them; if so, how are they protected —

are any fittings placed in spaces where inflammable or explosive dust or gases are liable to be present, if so, how are they protected —

—, how are the cables led —

where are the controlling switches situated —

Searchlight Lamps, No. of —, whether fixed or portable —, are their fittings as per Rule —

Arc Lamps, other than searchlight lamps, No. of —, are their live parts insulated from the frame or case —, are their fittings as per Rule —

Motors, are their working parts readily accessible yes., are the coils self-contained and readily removable for replacement yes.

are the bushes, brush holders, terminals and lubricating arrangements as per Rule yes., are the motors, located in well-ventilated compartments in which inflammable gases cannot accumulate and clear of all inflammable material yes.

are they protected from mechanical injury and damage from water, steam or oil yes. are their axes of rotation fore and aft yes.

if situated near unprotected woodwork or other combustible material, are the motors of the totally enclosed, pipe ventilated, forced draught, drip or flame proof type —

—, if not of this type, state distance of the combustible material horizontally or vertically above the motors — and —

Control Gear and Resistances, are the generator field and motor speed regulators, starters and controllers constructed and fitted as per Rule yes.

Lightning Conductors, where lightning conductors are required, are these fitted as per Rule —

Ships carrying Oil having a Flash Point less than 150° F. Have the special requirements of the Rules been complied with regarding switches, joint boxes, section and distribution boards, protection of cables, method of distribution, lead of cables, lights and fittings —

If portable lamps for use in dangerous spaces are supplied, are they of a type approved by the Home Office —

All Conductors are of annealed copper conforming to British Standard Specification No. 7.

The Insulated Conductors are guaranteed to withstand the immersion and resistance tests specified in the Rules.

The foregoing is a correct description.

Schiffs-Installations-Ausbau-Gesellschaft  
Ingenieurbüro Stettin

Electrical Engineers.

Date

COMPASSES.

Distance between electric generators or motors and standard compass Res 100 ft.

Distance between electric generators or motors and steering compass 95 ft.

The nearest cables to the compasses are as follows:—

A cable carrying 0.5 Ampères close to standard compass, close to feet from steering compass.

A cable carrying 0.5 Ampères 6 feet from standard compass 8 feet from steering compass.

A cable carrying — Ampères — feet from standard compass — feet from steering compass.

Have the compasses been adjusted with and without the electric installation at work at full power.

Has the effect of switching on and off circuits, motors and other electro-magnetic apparatus within the vicinity of the compasses been noted.

The maximum deviation due to electric currents was found to be degrees on course in the case of the standard compass, and degrees on course in the case of the steering compass.

Builder's Signature. Date

Is this installation a duplicate of a previous case No If so, state name of vessel —

General Remarks (State quality of workmanship, opinions as to class, &c.)

Workmanship and material of this Installation are of good quality. As the conductors used are of the German Standard, the Society's Rules regarding conductors have been applied generally. The Installation is otherwise fitted in accordance with the approved plan and in conformity with the requirements of the Society's Rules and has stood under full load with satisfactory results.

It is eligible in my opinion for the record of, "Electric Lights"

It is submitted that  
This vessel is eligible for  
RECORD.

Electric 18/2/29.

Total Capacity of Generators 44 Kilowatts.

The amount of Fee ... £ 26 : 0 : When applied for,  
31st Jan 1929

Travelling Expenses (if any) £ : When received,  
27/1/29
