

s.s. "ETNA".

(No. 69347 in Register Book).

Proposed Classification.

Plans giving particulars of crank and line shafting were recently dealt with.

The Gothenburg Surveyors have now forwarded a plan of the boilers, which were constructed in 1918 by Messrs. Fredrikstad Mek. Verkstad, under the survey of the Norske Veritas.

The scantlings of the boilers as shown on the plan meet the requirements of the Rules in force at the time the boilers were made for a working pressure of 220 lb. per sq. inch.

IT IS SUBMITTED that, provided the boilers be examined throughout, found in good order and safe working condition and their scantlings be in accordance with the plans, the boilers might be accepted for the original working pressure of 220 lb. per sq. inch.

Return 1 plan.  
Retain copy.
