

Messrs. Harland & Wolff Ltd.

Yard No. 1003G.

The Builders propose to instal a 100 Kw.,
220 volt, direct current generator driven by a 440 volt A.C.
motor supplied from the shore, and ask if this set is to be
inspected during construction and testing at the Makers' Works.

The above set cannot be used at sea.

IT IS SUBMITTED that it would not be
necessary to inspect during construction and testing the
100 Kw. set for port use, but that the Makers' test records
should be submitted for approval.

The Belfast Surveyors should be informed
accordingly.

Advise Glasgow Surveyors.
