Messrs Lloyd's Surveyors,

342 Argyle Street.

Dear Sirs.,

We return herewith photo of our No.568 Boiler having noted the alterations as re requested.

In the bottom back end plate we would prefer to increase the thickness of plate to 13/16" instead of shifting positions of stays, or fitting doubling as you propose. Also on bottom combustion chambers it would suit us better to fit T bars 6" x 3" x 5/8" instead of the angle bars.

Kindly let us know if you will accept of these proposals, and oblige.

Yours truly,

pro Muir & Houston, Ltd.
