

s.s. "CITY OF VENICE".

Testing of Fuses.

The Manchester Surveyors state that the special test requested in the Secretary's letter of the 4th August cannot be made at Manchester and that the test would have to be made on board the vessel at Belfast.

In these circumstances it is submitted the Belfast Surveyors be informed of the required test.

The fuses to be tested are those shown on Metropolitan Vickers Plan B.855283 connected to the switch KS where marked "Propulsion Machine Control" and they supply the Propulsion Generator separately excited field and some alarm circuits. It is required that these circuits be connected exactly as shown when making the test previously outlined.

The Liverpool Surveyors should also be informed that in the altered circumstances the services of Mr. R. C. Clayton will not be required in this case.
