The Owners propose on the homeward voyage from
to use the foremost deep oil fuel tank for the

(2)

of palm oil. A cofferdam is to be constructed to

under surface of the oil fuel in the adjacent deep

double bottom plating shall not be

subjected undue

pressure when to avoiding the cleaning of the bilges

double bottom tanks are being

filled, and to use the new bilge compartment

formed (1) as a dry bilge, or (2) as part of the double

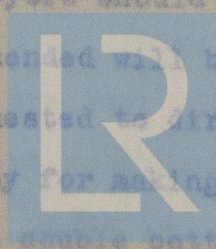

bilge; holes being cut in the margin plate for access and
drainage.

It is submitted the Surveyors be informed that the
drawings and arrangements of the proposed new cofferdam
as shown and amended will be approved, provided
they be carried out to their satisfaction.

With regard to the arrangements shown on the
sketch for the construction at the bilges in way of the
foremost deep tank, the Surveyors should be informed that
the proposals as shown and amended will be approved.

They should, however, be requested to direct the attention
of the Owners to the necessity for making arrangements so
that the under surface of the double bottom plating shall

not be subjected to undue pressure when the double bottom
