

S.S. "SILVERLAUREL".

Messrs. J.L. Thompson & Sons. Yard No. 588.  
-----

IT IS SUBMITTED Messrs. Harte, Lindley & Co. be informed it is considered that the proposal to employ three Diesel Generators of 37 KW each, for the purpose of supplying power to the refrigerating installation described in their letter of the 8th instant, is in order, it being noted that the horse power required during normal working conditions would be about 60, and that only one compressor would be in use at sea.
