

Shipbuilders: Messrs. *Fredrikstad mek Verkstad* Yard No. *289*
Engineers: Messrs. *- do -* Engine No.

It is submitted that the ^{*amended*} plan of *cylindrical boiler*
merits approval
for a *working pressure of 15.5 Kgr. per CM²*
provided *the boiler be constructed under the usual*
conditions of survey and testing.

It is noted that the combustion chambers of these boilers are
to be of riveted instead of welded construction as previously
proposed and for which plates tested by the Norske Veritas
Surveyors were accepted.

In consequence of the modifications now proposed, larger
plates will be required for the front and back end plates
of these combustion chambers, and it is concluded these
plates will be made and tested in accordance
with the Rules but this should be confirmed.
