

S.S. "GRETASTON".

-----

In connexion with the investigation being made into the strength of this vessel in the actual condition of load it would be of interest if the Builders could ~~state~~ state whether all the coal supplied was of the same quality, and the daily consumption of coal, also whether any further supplies of coal were shipped at Bahia or at any other port on the homeward voyage.

It is also desired to know the order in which the various compartments in which coal was carried were emptied.
