

Messrs. Wm. Denny & Bros., Ltd., Yard No. 1333, Engine No. 1083.
Automatic Feed Water Regulator by Messrs. Laidlaw, Drew & Co. Ltd.

IT IS SUBMITTED the Leith Surveyors be informed
it is noted the Firm now propose to make the grid headers of
steel and to secure the thermostat tubes by means of welding;
also that the connecting pipes will be attached to the boiler
shell by means of screwed and welded flanges and this is in
order.

The further particulars of tests carried out
on the apparatus by the Surveyors are noted and are
considered satisfactory.

In the circumstances, the Surveyors should
inform the Firm that the apparatus could be accepted for
the proposed working pressure of 60 lb. per sq. inch,
provided the scantlings of the headers and pipes are
suitable and the apparatus be fitted on board and tested
under full working conditions to the satisfaction of
the Surveyors.

The plans should be returned and fresh plans
embodying the above amendments should be forwarded for
approval and for purposes of reference.

Advise Glasgow Surveyors.
